

ABM Context Brief

Supplement to the AI Enablement Partner RFP

Jobber Demand Generation | May 2026 | Confidential

PURPOSE OF THIS DOCUMENT

The RFP issued in April 2026 outlines our overall AI enablement needs across Demand Generation. This document provides additional context on one of the highest-priority use cases: Account-Based Marketing (ABM) across complex home service verticals.

We're sharing this to help you understand the depth of vertical-specific knowledge that effective ABM will require, and to give you enough context to propose how AI can meaningfully improve how we identify, reach, and convert high-fit accounts across industries.

TARGET SEGMENT

Our ABM focus is on what we call Scaled Businesses — home service companies with 10 or more employees operating in the \$500K–\$5M annual revenue range. These are operationally complex businesses that have outgrown basic tools and are actively looking to modernize.

Why this segment matters:

Scaled Businesses represent a disproportionate share of Jobber's revenue relative to their volume in our customer base. They have higher software budgets, more complex workflows, and greater long-term retention potential. Getting ABM right for this segment is a meaningful revenue lever.

PRIORITY VERTICALS

Within the Scaled Business segment, we are focused on complex trade verticals — industries where the operational challenges are significant enough that software adoption is driven by genuine pain, not convenience. The verticals we are prioritizing for ABM are:

- Roofing
- Construction & Contracting
- HVAC
- Plumbing
- Commercial Cleaning

Each vertical has distinct emotional drivers, buying triggers, and objections. Effective ABM requires messaging that speaks to the specific pain of each industry — not generic field service positioning.

INDUSTRY PAIN POINTS — EMOTIONAL DRIVERS

Below is a high-level summary of the emotional drivers that push businesses in each vertical to seek out software. This is the foundation for how we think about ABM messaging by industry.

Roofing

Overwhelm from Chaos: Managing complex, high-cost projects with disorganized tools creates significant stress. Owners need a central hub to bring order to their operations.

Fear of Mistakes: Long sales cycles and high-ticket jobs mean one missed follow-up, invoice, or communication change can damage their reputation and cost them the job.

Frustration Over Wasted Time: Repetitive manual tasks — calculating materials, double-entering data — feel like a tax on their productivity. They want time back.

Financial Anxiety: High material and insurance costs make profitability tracking critical. Slow payments compound the stress. They want guaranteed profitability and faster collection.

Construction & Contracting

Mental Exhaustion / Burnout: Owners are keeping the entire business in their heads — 60+ hour weeks, late-night admin, and constant context-switching are unsustainable.

Frustration with Chaos: A scattered mix of spreadsheets, notes, and text messages to manage crews and projects is described as a daily nightmare.

Fear of Leaking Money: Missed change orders, lost receipts, and unbilled tasks create constant anxiety. Being busy but not actually making money is a real fear.

Desire for Professional Pride: They want to present as a legitimate, established business — one that wins larger bids and earns client trust from the first touchpoint.

HVAC

Overwhelm and Burnout: Disjointed systems and the mental load of remembering everything — combined with long hours in the field — creates exhaustion that owners can't sustain.

Fear of Failure or Stagnation: The pressure to provide for family and employees, and the fear of falling behind competitors who modernize faster, is a significant motivator.

Desire for Freedom: They want to reclaim personal time and achieve work-life balance — to stop being tied to the business 24/7 and be present for what matters outside of work.

Plumbing

Overwhelm and Burnout: Mental overload leads to forgotten estimates and invoices, lost sleep, and a sense of being permanently behind.

Fear of Looking Small: Imposter syndrome is real. They want professional polish in every customer interaction to justify their rates and compete with larger operations.

Frustration with Leaving Money on the Table: Techs forgetting to bill tasks or materials, combined with the emotional toll of chasing overdue payments, creates high financial anxiety.

Desire for Control & Peace of Mind: Owners feel like babysitters. They want a business that runs independently — and the personal time that comes with it.

Commercial Cleaning

Pride & Ambition: Owners want professional legitimacy and to be seen as scalable enterprises, not solo operators. A credible image is key to winning high-margin contracts.

Need for Control and Peace of Mind: Remote, often unsupervised night work creates intense anxiety about job completion and no-shows — a top reason contracts are lost. They need visibility and accountability.

Admin Chaos: Disconnected tools for scheduling and invoicing leave owners drowning in admin. They want to stop being data entry clerks and start operating like CEOs.

WHAT WE'RE LOOKING FOR FROM YOU ON ABM

As you develop your proposal, we'd like to understand specifically how AI can help us:

- Build and activate industry-specific audience strategies at scale — going beyond generic targeting to reach high-fit accounts by vertical
- Personalize messaging and creative to match the emotional drivers of each industry without requiring a full manual lift per campaign
- Identify and prioritize high-fit accounts within the Scaled Business segment using AI-driven signals and scoring
- Compress the research and strategy work required to stand up a new vertical ABM program — what currently takes weeks should take days

We're particularly interested in approaches that create durable, repeatable playbooks — not one-off campaigns. The goal is a systematic ABM capability, not a project.

Note on confidentiality:

This document contains directional context to support your proposal. It does not contain proprietary internal data, competitive intelligence, or customer-level information. A formal NDA and security assessment will be completed before any deeper access is granted.
